

1.  $R^1 = \bar{R} = 100,80 \Omega$   $N=20 \Rightarrow$  Student-t eloszlás.  $s_1 = 1,45 \Omega$   $s' = \frac{s_1}{\sqrt{20}} = 0,3242 \Omega$  (2)

[B]

$$\Delta R = s' \cdot \underbrace{t_{19; 0,01}}_{2,138} = 0,8229 \Omega$$

$$P[R^1 - \Delta R < R < R^1 + \Delta R] = 1 - \alpha$$

$$P[99,98 \Omega < R < 101,62 \Omega] = 98\% \quad (2)$$

$$E\{\Delta R\} = \Delta R_0 = 0,5 \Omega \Rightarrow R^1 = \bar{R} + \Delta R_0 = 101,3 \Omega \quad (1)$$

[5]

$$\Delta R = R_x - R_i$$

4.  $G + j\omega C = |Y| [\cos \varphi + j \sin \varphi]$   $\omega = 2\pi f \approx 1000 \frac{1}{s}$   $R = \frac{1}{|Y| \cos \varphi} = 20,01 \text{ M}\Omega$  (2)

$$C = \frac{|Y| \sin \varphi}{\omega} = 2,000 \text{ nF}$$

$$\frac{\Delta R}{R} = \frac{\Delta |Z|}{|Y|} + \frac{\Delta \cos \varphi}{\cos \varphi} = \frac{\Delta |Y|}{|Y|} + \tan \varphi \Delta \varphi = 20,1\% \quad (2)$$

Fázismérés: időintervallum-mérésre nem alkalmas:

$$\varphi = 2\pi \frac{\tau}{T_x} = 2\pi \bar{c} f_x$$

$f_x$ -et ismeryük.
